

# Sol Robots Releases *Quiz Press* 1.7

## Test Making Just Got Easy

Cedar Park, Texas — April 11, 2007 — Sol Robots® today unveiled *Quiz Press*™ 1.7, an application for making online and print tests, and now featuring 64 bit encryption and multi-lingual spell checking. The quizzes themselves are encrypted keeping the quiz answers secure. When the student finishes, the test results can now be sent back to the teacher with a tamperproof encrypted email. *Quiz Press* now uses the built-in multi-lingual\* spell checker on Mac and our 170,000 word English spell checker on Windows. Either way you now can avoid making embarrassing spelling mistakes in your tests and quizzes.

“*Quiz Press*’s encryption technology was designed to give teachers piece of mind when administering tests. You have enough to worry about, you can stop worrying about your students cheating from the computer.” said Cortis Clark, president of Sol Robots.

\*Mac OS X 10.2.4 needed for multi-lingual spell checker. The list of supported spell checking languages (As of Mac OS X 10.4.9): English (US, UK, AU, and CA variants), Spanish, French, German, Italian, Dutch, Portuguese (P and BR variants), and Swedish.
